

Shower Door Do's & Don'ts

Shower doors are not water tight.

Shower enclosures installed by Precision Glass Services, Inc. are designed to prevent leaks under normal shower conditions. Excessive water pressure or directing the shower sprays directly at the door DO **NOT** represent normal shower conditions and can result in leaks.

Precision Glass Services, Inc. will recommend which style of enclosure, framed or semi-framed, is best for your shower. However, ultimately the decision is the customers.

Precision Glass Services, Inc. warrants all of its products and installation for one year from date of installation. Our manufacturers products may warrant theirs for a longer period (ask for details)

Glass breakage or damage to glass is NOT COVERED after installation. Please note that any product sold by Precision Glass Services, Inc. but not INSTALLED by Precision Glass Services, Inc. Is void of any warranty including any manufacturer's warranty.

Your shower enclosures are made with safety glass, durable hardware and the finest aluminum. With proper care and maintenance your shower enclosure will provide you with many years of trouble free use.

Cleaning and maintaining your shower enclosure

For best results enclosures should be cleaned with a squeegee or towel after exposure to water.

DO NOT use abrasive or acid based cleaners on the glass or metal of your enclosure. Abrasive or acid based cleaners will scar your metal or glass.

Cleaners that contain vinegar, ammonia, bleach, and or acid based chemicals should never be used. Abrasive cleaners and scouring pads should be avoided, as they too will damage the metal and glass components.
